

Disaster Recovery

Your business IT in safe hands

Tardis Services is one of Australia's leading IT providers, offering an end-to-end service for the design, implementation and support of enterprise information systems.

Established in 1994, and now part of the worldwide Meridian Group of companies, we stand out by taking a business-centric approach to IT infrastructure, working with the world's leading technology brands to design best-of-breed solutions to your business information challenges.

Partnering with Tardis to build and manage your information infrastructure means you have a single point of contact, and a single trusted partner, committed to achieving your business objectives.

We are a leading provider of IBM® Intel™ and UNIX Servers, Storage and Infrastructure Solutions specialising in corporate, SME and Government markets.

Tardis offers a single point of contact for your IT needs, from concept through to implementation and on into the future, with systems support, maintenance and upgrades.

Disaster Recovery

'The marketplace can be very unforgiving. If you are out of business for a couple of days, they (customers) may be forced to go elsewhere — and once they form a relationship with another supplier, they may not come back.'

*Peter McNally, KPMG
writing in the Sunday Telegraph*

In today's networked environment, data and application availability are critical for the continued operation of a business. Any network downtime can be expensive to your business in terms of both time and money.

A disaster can be anything that results in inability to access to the IT infrastructure, be it fire, burst water pipes, gas leaks, accidents causing serious injury, storms or damage to adjacent property. Or it could be serious corruption of a database. The result is the same — failure to operate the IT infrastructure to support the critical business processes.

Tardis Services can tailor a Disaster Recovery test procedure to fit your business needs for POWER Systems (Formerly System p® and System I®).

A typical agreement can include:

- Design of Disaster Recovery procedure on a system by system basis
- Documentation of Disaster Recovery procedures
- Storage of Disaster Recovery related materials
- Management of tape delivery to Tardis premises
- Tape recovery at Tardis Premises
- Validation of tape
- Validation of Disaster Recovery Procedure
- VPN Access by your staff for validation of system recovery
- Update of Disaster Recovery documentation and procedure.

Turn-key infrastructure solutions — built on innovative thinking

In a rapidly changing world, the edge belongs to the person who knows what's going to happen next.

Our reputation for meeting budgets and deadlines, and for delivering solutions that deliver results, comes down to our fundamental commitment to innovation; and central to this is the constant development of the skills and knowledge contained within our organisation.

Tell us what you want to achieve, and we'll work with you to deliver the best, most reliable and most cost-effective way to do it — from concept to implementation and into the future — enabling your business to gain maximum value from your information assets.
